About Nexla

Nexla is the leading Integration platform, built with AI, for AI. Nexla takes a metadata driven approach to converge diverse integrations across Data, Documents, Agents, Applications, and APIs into a single design pattern. We accelerate the development of solutions for GenAI, Analytics, and Inter-company data. Nexla makes data users and developers up to 10x more productive by delivering a true blend of no-code, low-code, and pro-code interfaces.

Leading companies including DoorDash, LinkedIn, Johnson & Johnson, and LiveRamp trust Nexla for mission-critical data. Named in the 2022, 2023, and 2024 Gartner Magic Quadrant™ for Data Integration Tools and top-rated by customers on Gartner Peer Insights, Nexla is a remote-first company headquartered in San Mateo, California.

At Nexla, our culture is built around our core values: **Have Empathy, Be Curious, Be Intellectually Honest, Achieve Excellence**, and **Remember to Relax**. We put our customers at the heart of everything we do, foster a data-driven mindset, take ownership of our work, and believe in the power of teamwork to achieve ambitious goals.

Role

We process 300+ billion rows daily, yet we operate with the intensity of a seed-stage startup. We aren't looking for "cogs in a machine." We are looking for builders.

As an early-career engineer at Nexla, you won't be stuck on bug fixes for months. You will write core code, debug production systems, and help us build the next generation of intelligent, context-aware connectors that power the GenAI revolution.

Responsibilities

- **Build & Ship (70%):** Implement core features like intelligent pagination, schema evolution, and rate-limiting. You'll own your code from the first line to the final deployment.
- **Solve "Dirty" Data Problems:** Real-world data is messy. You'll build self-recovery mechanisms and automated retries to keep massive pipelines running without human intervention.
- **Learn Distributed Systems at Scale:** You'll dive deep into Kafka and distributed runtimes. You won't just use these tools; you'll learn how to tune them for maximum performance.
- **Architectural Growth:** Work alongside our CTO and senior leads to understand why we make certain tech choices (e.g., Java vs. Rust) and how to design for multi-tenancy and low latency.
- **Documentation & Quality:** We believe "done" means documented. You'll write SDK docs and RFCs, ensuring our platform is easy for other developers to use.

Qualifications

Software Engineer - Connectors

Bengaluru . Hybrid

Must-Haves

- **0-2 years of experience** in software engineering.
- **Strong Foundations:** You are comfortable with **Java, Kotlin, or Scala**. You understand the basics of concurrency and how the JVM works.
- **CS Fundamentals:** You know your way around data structures, algorithms, and REST APIs.
- **The "Builder" Spirit:** You have a GitHub repo, a side project, or a technical blog that shows you love to tinker and learn.
- **Ownership Mindset:** You don't wait for a perfectly groomed ticket. You thrive in ambiguity and are willing to jump into a production issue to help the team.
- **Global Collaboration Window:** Ability to **overlap with morning PST (Pacific Standard Time) working hours** for syncs, design reviews, and collaboration with our US-based leadership and engineering teams.

Nice-to-Haves

- Exposure to the **Modern Data Stack** (Snowflake, Databricks, Kafka, or Spark).
- Experience with **Docker or Kubernetes**.
- A background in competitive programming or contributions to open-source projects.
- Interest in **Generative AI** and how data feeds LLM agents.

Why This Might Be Worth It

- **Unmatched Scale:** Your code will process billions of rows for global brands on day one.
- **Direct Mentorship:** Work in a small, elite team with direct access to senior leadership. This is a "fast-forward" button for your career.
- **AI-First Engineering:** We aren't just "using" AI; we are building the infrastructure that makes AI possible for the enterprise.
- **The Best of Both Worlds:** The stability of a proven product with the speed and ownership of a startup.
